ABSTRACT

This report is one in a series of needs assessment publications that comprise the initial phase for PROJECT DESIGN, an ESEA Title III project administered by the Fresno City Unified School District. Subprogram Brainstorm was conceived to provide an opportunity for all staff members of the Fresno City Schools to contribute directly to various phases of the project. The Brainstorm program was geared to identify areas in which current educational. programs and services fail to meet perceived standards of quality or optimum education. A training session was held for 43 teachers recognized as effective group discussion leaders. Each then conducted a minimum of three Brainstorm sessions. A total of 166 sessions were organized through the district to reduce traveling to a minimum. Reports were forwarded immediately after each session. Data were classified under six major groups of needs: (1) personnel, (2) students--general, (3) students--specific groups, (4) management, (5) plant, and (6) relationships. A frequency distribution was arranged. No attempt was made to establish priorities among the stated needs. (DE)

APPRECIATION

The project staff would like to express appreciation to those whose participation made Brainstorm a dynamic and stimulating experience of some significance. Our particular thanks is given to the Brainstorm session leaders whose professional interest and attitude are a credit to the Fresno City Schools.

INTRODUCTION

Sub-project Brainstorm was conducted during the month of March 1968 as an integral and basic part of the information gathering process of Interagency Planning for Urban Educational Needs, called Project Design for brevity, a Title III Project administered by the Fresno City Unified School District.

Background

In recent years leadership elements in the Fresno Community and the Fresno City Schools have recognized the complex interrelationship of school and community problems in meeting the diverse needs of citizens throughout Fresno. This recognition focused not only on the desirability, but the paramount necessity, of coordinated planning of various public services. Changing physical factors in urban society, such human factors as poverty, unemployment and discrimination, and factors of limited financial resources and potentially untapped human resources emphasize need for such coordinated planning.

Interagency Planning for Urban Educational Needs was conceived by school leadership personnel as a project to bring under one umbrella the current major problems of the schools, the relationship of the schools to the broader community and its challenges, the impact of educational changes now occurring throughout our nation, and the desirability of capturing a fresh new view of the needs, goals and aspirations of our youth and adults; then to weld into an integrated plan the best use of available resources to meet the totality of current and projected needs according to their rational priorities.

A paramount consideration in the application to the United States Office of Education for project funding was the involvement of the community in educational planning. The organization of a Project Advisory Committee bringing together leaders of major community organizations with representatives of city, county and education agencies represents one involvement method. A second is the organization of sub-project "Speak-Up" to provide a simple and effective structure for direct participation of a wide sampling of all citizens throughout the community. A third involvement process is the development of similar discussion groups for youth in each secondary school.

Purposes of Brainstorm

Sub-project Brainstorm was conceived to provide an opportunity for all staff members of the Fresno City Schools to contribute directly to various phases of the project. Because the first step in logical planning is to identify problems and needs, the first round of brainstorming was geared to identify areas in which our current educational programs and services fail to meet perceived standards of quality or optimum education. The major purposes for this first round of brainstorming were the same purposes which might justify additional use of this technique with school staff groups. These are to encourage and welcome full involvement in shaping educational directions by school personnel so greatly affected and to tap the rich body of knowledge and skills represented by this group. A potential side benefit or additional purpose was the possible gain in introducing a new leadership skill which teachers and others might find effective.

Data Collection Procedure

The brainstorming process as used in the project is an adaptation of the technique described by Alex Osborn in Applied Imagination. Lists of teachers recognized as effective group discussion leaders were solicited from teacher organization officers, district administrators, school principals and program coordinators. The project staff invited participation by those whose names appeared consistently on these lists. A training session was held on Saturday, March 2nd, which included a discussion of the process of brainstorming and its application to the needs assessment phase of this project. Forty-three leaders attended. Each leader then conducted a minimum of three Brainstorm sessions as assigned by the staff.

One hundred and sixty-six sessions were organized throughout the district to reduce traveling to a minimum. Peer groups were established for elementary teachers, junior high school teachers, senior high school teachers, school maintenance and custodial staff, school clerical and secretarial staff, principals, counselors and deans, and similar district groups. 2,793 (81%) of the 3,428 district staff participated.

Principals were asked to facilitate arrangements for comfortable seating, adequate blackboards and recording assistance for sessions held in their schools. In some cases school secretaries and clerks recorded. In other cases members of the discussion groups served as recorders. A number of school secretaries typed the results to

be forwarded to the project office. All teacher and classified groups were led by teacher Brainstorm leaders; administrator groups were led by project staff members. At each session a brief explanation of the purpose of the project, the problem to be attacked and the well-established rules of ideation were explained by leaders, some of whom used visual charts. Time for each Brainstorm session ranged from twenty-five minutes to well over an hour, with an average in most sessions of about forty-five minutes. The number of need statements submitted by any group was not indicative of quality in any sense and ranged from about twenty to over one hundred and twenty-five, most groups producing between forty and fifty. An optional plan was the identification of highest priority needs by groups. A small number of reports had such identifications.

Leaders were responsible to forward reports personally to the project office immediately after each session. Many leaders attempted to establish a follow-up procedure to collect ideas which individuals might have been reluctant to express in groups, or which were thought of later. Very few items were received through this procedure although a strong opinion was expressed by a number of leaders that a follow-through round of Brainstorming during the next week or so after the first round would have produced very valuable data.

On March 20th an evaluation session was held at which all the Brainstorm leaders were invited to discuss the process, to offer suggestions for its improvement if used in the future, and to discuss plans for interpretation and best use of the material gathered.

Data Classification Procedure

The task of classifying and organizing findings was accomplished by a selected team of five Brainstorm leaders who indicated a desire and willingness to help, assisted by two graduate psychology students experienced in such work. Individual items were initially classified into eight major categories, each with a series of sub-categories providing for a grouping of similar items. Each individual response listed on each report form was tallied.

Some interpretation was essential in order to group the thousands of individual statements into a reasonable number which would provide both a meaningful interpretation of major concerns for various aspects of the educational program and yet maintain sufficient identity of individual items so that participants could recognize each contribution made.

During the classification process some categories were added, some divided, some combined, resulting in the six major groups of needs as reported. These are included in the blue section, titled "Frequency Distribution of Stated Needs". Since few reports indicated a priority among findings, the classification team felt this information lacked sufficient significance for inclusion.

Individual statements were then combined according to the larger groups under which they had been organized. These are presented as, "Frequency Distribution of Stated Needs Summarized by Categories".

CONCLUSIONS

Observations About Process

The identification of educational needs is most difficult. Thus, a great many educational plans are based on rather broad, intangible goals, or they move directly into the organization of resources designed to solve certain problems without the specific identification of needs which the problems represent. The brainstorming technique is ideally suited to producing a wide range of possible solutions to certain types of defined problems. When the problem being brainstormed actually becomes the identification of problems and needs, the process tends to be more difficult.

It was recognized at the outset that there would be some difficulty in encouraging groups to discuss needs of students rather than particular individual problems. It was also recognized that there would be a tendency within the groups to discuss solutions to problems rather than to discuss the needs which define problems.

In summary, brainstorming as a technique of ideation in creative problem solving was essentially a new process to the school staff groups. It tackled the toughest kind of problem to brainstorm, dealt in an area where our sophistication is not highly developed, and was conducted with very brief planning and training for a group of hardy volunteers.

In this perspective the process produced some stimulating results. Sub-project Brainstorm identified nearly 10,000 concerns of school teachers and other staff members. Many leaders had positive comments about their personal satisfactions in being exposed to a different type of discussion leadership skill and having the opportunity to work with and discover new facets in other members of the school community. Most process problems identified can be materially reduced in future use of this technique.

Originally, it was hoped that brainstorming might prove helpful in other phases of the project. It now appears that the same technique can be much more valuable in the development of solutions early in the next school year, especially after the experience gained in this first round. A number of solution potentials derived from the first round are already on file for use in later phases of the project.

Affective data is always interesting to analyze. One typical limitation is that the significance of data is intimately related to the classification system. For example, organizing needs associated with school plants and facilities into one classification resulted in a significant number of needs being associated with this topic. However, a great many needs were also associated with the general topic of communications. These are implied in items which refer to role definition, information deficiencies, and the like, but the total perspective of communication needs is realized only by reading through findings item-by-item because such needs were not separately classified.

Opposites were stated. "More and better audio-visual" was identified along with "Less audio-visual." An interesting series of needs also included opposites. This was: "Reduce shrubbery," "Eliminate trees and shrubbery," "Remove sycamore trees," "Fewer trees," "More trees," "Better placement of trees," "More trees," "Better landscaping."

Product testimonials may be found, even in criticism. We should have "More Yardvacs," "Use more IBM," "Ban Wilhold glue."

The problem of identifying what actual needs are implied by stated needs becomes much more complex when grossly generalized comments are made, such as "K-6 should live at school," "Director of errors so district can admit its mistakes," "Bury the central office," "The Board should take a world cruise." For purposes of the project such statements have no significant value beyond verifying the freedom that people felt to be frank.

Major Findings

Listed below are items taken from the Frequency Distribution of Stated Needs on the basis of 35 or more individual responses.

1.	Trained teacher aides for clerical, library, playground, extracurricular programs	170
2.	Limit or lower class size	112
3.	Air conditioning	98
4.	More and better material and supplies generally all areas	9 0
5.	More adequate, diversified, practical in-service classes, workshops and demonstrations for all district employees	87
6.	Adequate, conveniently placed staff workrooms/lounges	74
7•	Reduction of required curriculum to allow adaptation of individual student needs	69
8.	More well designed storage space for utilization by staff and students	67
9•	More training and emphasis on improvement of basic skills especially reading and composition (all levels)	62
10.	Audio-visual equipment assigned permanently in each room	61
11.	Use consumable work books and texts	61
12.	Professionally competent full-time counselor elementary-secondary	61
13.	More adequate guidance services, begun in earlier grades	60
14.	Few interruptions - limit or eliminate noise distrations	58
15.	Carpet	58
16.	Non-graded classes (especially primary grades)	5 5
17.	Find some new method of financing schools	53
18.	Adequate preparation time for all teachers on a flexible basis	52

19.	More and better equipment, generally all subjects	52
20.	Specially trained elementary teachers in Physical Education	51
21.	Full time nurses	50
22.	Instruction in family life, sex education, personal hygiene and personal and social adjustment	48
23.	Higher salaries comparable with other professions tied to cost of living	4 8
24.	Specially trained elementary teachers in Music	47
25.	No double or split sessions	46
26.	Individual teacher and departments should have funds to get what they need when they need it	45
27.	Fewer responsibilities for extracurricular duties and supervision of students	45
28.	More and better vocational training	կկ
29.	Released time and funds for visitation and research	لبل
30.	Library, study and other resource centers open other than during school hours	43
31.	Get best available for each grade level (books)	43
32.	Pass - fail grading or no report cards	42
33.	Better and more supervision during lunch hour in restrooms, halls and playgrounds	42
34.	Better custodial services, more thorough, more often	42
35.	More and better parent-teacher communication conferences	42
36.	Flexibility in time for certain subjects and grade levels with modification of plant as necessary to allow for flexibility	42
37.	Specially trained elementary teachers in Art	42
8.	Sequential programs throughout grades and more	<i>4</i> U .
	correlation between subject areas	39

39•	More and better audio-visual	3
40.	Encourage field and study trips (establish simplified procedures)	39
41.	Stricter and better enforcement of rules	39
42.	Greater efficiency, less red tape in purchasing and supplies	39
43.	Re-evaluate and equalize classified staffing ratio	39
44.	Resource people and busses for field trips	39
45.	Remodel grading system and/or replace with parent- teacher conferences	38
46.	More classrooms	38
47.	More effective Parent Teachers Association, more parent involvement and participation	37
48.	Broader staff participation in determining standards, policy making, determining needs	36
49.	Four quarter system or night classes to allow greater utilization of school plant	35
50.	Clearer job descriptions and standards with expected assumption of only those duties for which specifically hired	3 5
51.	More responsive, practical community resource people as consultants	. 35
52.	Television in each room (some say color)	35
53•	More functional furniture	3 5

Distribution and Use of Findings

School staff groups participating in Brainstorm sessions naturally expressed keen interest in seeing the product. It is therefore urged that the limited number of copies we are able to produce be made fully available to staff groups at each school and in each of the district service departments.

Copies are being forwarded simultaneously to Brainstorm leaders, the Board of Education, superintendent and cabinet, each school and children's center, district services department heads, the Project Advisory Committee, specialists in the Needs Assessment Task Force, the news media, the public libraries, and the School of Education at Fresno State College.

The primary value from Brainstorm findings will be derived by members of the Project Advisory Committee, the Needs Assessment Task Force, the project staff, and the Phase II Task Force which next year will be developing potential solution models and making simulation analyses to determine directions for our educational plan. The primary value from the process could only be measured by behavioral changes it exerts - and will never be known.
